

What materials are used in factory electrical distribution boxes

Article Overview

Factory electrical distribution boxes are typically made from metals like steel or aluminum, and high-performance plastics such as polycarbonate, PVC, or thermoset composites, chosen for durability, fire resistance, and corrosion protection.

Common Materials

Metals:

- Steel (galvanized or stainless): Provides high strength, impact resistance, and durability, making it ideal for industrial environments where boxes may face mechanical stress or exposure to harsh conditions. Stainless steel is particularly resistant to corrosion, suitable for wet or chemical-prone areas .
- Aluminum: Lightweight, corrosion-resistant, and easier to handle than steel, often used in indoor or moderate-duty applications .
- Plastics:
- Polycarbonate (PC) and Acrylonitrile Styrene Acrylate (ASA): Engineering thermoplastics that are strong, impact-resistant, and flame-retardant, suitable for indoor and some outdoor applications .
- PVC and High-Density Polyethylene (HDPE): Lightweight, non-corrosive, and cost-effective, commonly used for low-voltage or indoor distribution boxes .
- Thermoset plastics (e.g., SMC, fiberglass-reinforced composites): Offer excellent fire resistance, chemical resistance, and durability, ideal for corrosive or outdoor industrial environments
