

What to do when your router has fiber optic internet access

Article Overview

To use fiber optic internet, connect the fiber line to an Optical Network Terminal (ONT), then link the ONT to your router via Ethernet, and configure your network for optimal performance.

Step 1: Understand the Components

Fiber optic internet requires specialized equipment to convert light signals into data your devices can use. The key components are:

- Optical Network Terminal (ONT): Converts incoming fiber light signals into electrical signals compatible with your router. Usually provided and installed by your ISP .
- Fiber-ready Router: Supports high-speed connections, ideally gigabit or multi-gigabit, and modern Wi-Fi standards like Wi-Fi 6 or Wi-Fi 6e .
- Ethernet Cable: Connects the ONT to your router's WAN port for data transmission .

Step 2: Connect the Fiber Optic Cable

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Plug the fiber optic cable into the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .

Step 3: Link the ONT to Your Router...
