

What to do with fiber optic cables and broadband

Overview

Find out how to use fiber optics for high speed networking, electrical isolation, and extending Ethernet networks. This article will give you an overview of the use cases for fiber-optic networking, some of the terms used in fiber networking, and suggestions for setting up a fiber. Broadband is FAST Internet access - fast enough to use for everyday needs like work, school, healthcare, entertainment, shopping, personal connections and dealing with the government or other large organizations. The definition of broadband has changed over the years, starting at 4 megabits/second. Fibre optic technology is an effective cabled-based communication system. It is reliable, versatile, and widely used in many applications and industries. If you're choosing an internet plan for your home or office, having a solid grasp of the basics can help you make smarter, faster decisions. Unlike traditional cable internet, which relies on electrical signals, fiber optics transmits data using light signals through thin glass or plastic strands.
