

# What type of cable tray should be used for 35kV cables

## Overview

For a few types of installations, the National Electrical Code (NEC) specifies the cable tray type to be used: Single conductor cables and Type MV cables must be installed in ladder or ventilated trough cable trays. What are the reasons for selecting a specific type of cable tray?

The engineer or designer should select the type of cable tray. Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and utility installations. For proper installation, design, and maintenance, adherence to international standards is essential. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. This guide will help you choose the best cable tray. Cable tray, introduced in the mid 1940s, is a safe and economical solution for supporting requirements of electric power, signal, control, instrumentation and communication cables.
