

Where is the fiber optic cable on the Huawei router

Article Overview

The fiber optic cable connects to the optical port on the Huawei router, usually located at the back of the device and often covered with a rubber plug.

Locating the Optical Port

On most Huawei routers, such as the EG8247H5, the optical port is positioned at the rear of the device. It is typically labeled as “Fiber”, “ONT”, or “Optical” and may be protected by a small rubber plug to prevent dust and damage when not in use. Some models may have the port on the bottom or side, but it is always distinct from the Ethernet LAN ports, telephone ports, or power input.

Connecting the Fiber Cable

- Prepare the fiber cable: Use a fiber optic cable with the correct connector type, usually SC/APC or SC/UPC.
- Remove the protective plug: Carefully remove the rubber plug from the optical port.
- Insert the fiber connector: Align the connector and gently push it into the optical port until you hear a click, indicating a secure connection. Avoid bending the fiber sharply or pulling it forcefully, as this can damage the cable.
- Connect to the ONT if required: In some setups, the fiber cable first connects to an Optical Network Terminal (ONT), which then links to the router via an Ethernet cable.
