

Where to configure Huawei fiber optic panel networking

Article Overview

Huawei fiber optic networks are set up by connecting the main FTTR or ONT to the fiber uplink, cascading sub-devices if needed, and configuring the network via the web interface.

Physical Installation

- **Mounting the Device:** Place the Huawei ONT or FTTR main unit on a desk or wall, keeping it away from strong magnetic or electrical fields such as microwaves. Ensure at least 10 cm clearance on all sides for ventilation. Use expansion bolts and screws to secure wall-mounted devices, leaving 5 mm of screw ends exposed for stability .
- **Fiber Connection:** Connect the fiber optic cable to the optical port (SC/APC connector) on the main FTTR or ONT. For FTTR setups, the main device can support up to 16 sub-devices connected via fiber or Wi-Fi mesh. Transparent fiber cables are pre-connected, so no splicing is required. Use ATB boxes to manage excess fiber length and corner/internal cable supporters to guide fiber along walls .
- **Ethernet and Phone Connections:** Connect a Cat5e cable from the device's LAN port to your PC or switch. If using voice services, connect the phone cable to the TEL port. Optional USB devices can be connected to the USB port .
- **Power Connection:** Plug the power adapter into the device and a home electrical outlet. Ensure the POWER indicator turns green, indicating the device is powered on .

Web-Based Configuration

- **IP Address Setup:** Set your PC's IP address to the same subnet as the Huawei device. For example, if the device IP is 192.168.18.1, set your PC to 192.168.18.100...
