

Where to connect the fiber optic router

Article Overview

To connect a fiber optic internet line to your router, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via Ethernet.

Required Equipment

- Optical Network Terminal (ONT): Converts incoming fiber light signals into electrical signals your router can use, usually provided by your ISP .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Ethernet cable (Cat6a or higher): Connects the ONT to your router for optimal speeds .
- Router: Ensure it supports gigabit or multi-gigabit speeds and has a WAN/Internet port .

Step-by-Step Connection

- Install the ONT:
 - Locate the fiber wall outlet where the ISP's fiber line enters your home.
 - Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
 - Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes), .
- Connect the ONT to the Router:
 - Use an Ethernet cable to link the ONT's LAN/Ethernet port to the router's WAN/Internet port .
 - Power on the router and wait for the indicator lights to confirm a successful connection
