

Which port is the optical port on a Huawei switch

Article Overview

Plug the optical module into the SFP or optical port on your Huawei switch, ensuring it is compatible and properly seated; for combo ports, enable the optical interface if needed.

Identifying the Correct Port

Huawei switches typically have dedicated SFP/optical ports or combo ports (optical-electrical multiplexing interfaces). You should:

- Use SFP/optical ports for fiber connections. These are usually labeled as GE0/0/x or 10GE0/0/x depending on the switch model .
- For combo ports, only one interface (optical or electrical) can be active at a time. You may need to switch the port to optical mode using commands like `combo enable fiber` in interface mode .

Installing the Optical Module

- Wear an ESD wrist strap to prevent static damage .
- Remove the dust plug from the optical port and keep it for future use .
- Insert the optical module with the correct orientation (gold fingers down, handle closed) until it clicks into place .
- Check the module seating by gently pulling; if it does not come out, it is installed correctly .
- Connect the fiber cable only after the module is securely seated and ensure the fi...
