

Which server does Xiaomi AI use

Overview

mijia-control A production-ready MCP server that enables AI agents (Claude Code, Claude Desktop, Cursor, Hermes, etc.) to directly control Xiaomi/Mijia smart home devices through natural language. MiMo-V2 is Xiaomi's AI model platform for reasoning, multimodal understanding, text-to-speech, and production API deployment. Across flagship agent models, Browser Use workflows, voice generation, and low-latency inference, MiMo-V2 is built for developers, automation systems, and real-world AI. It recently made its own ChatGPT-like platform available to the public called Xiaomi MiMo Studio, where you can try out their latest model right in your browser MiMo-V2-Flash No installation, no application registration, just open the website and start chatting. It covers the available deployment options, prerequisites verification, and the high-level setup workflow. For. Xiaomi and TileRT achieved more than 1,000 tokens per second on a trillion-parameter AI model using a standard 8-GPU server. 5, but this profile is currently excluded from the public leaderboard because it still lacks enough non-generated benchmark coverage to rank safely. 5 is a proprietary model with a 1M token context window. It. It is our most capable model to date, delivering significant improvements over its predecessor, MiMo-V2-Pro, in general agentic capabilities, complex software engineering, and long-horizon tasks.
