

Why is GYFTY type optical cable suitable for aerial laying

Overview

Lightweight and Flexible: GYFTY cables are designed to be lightweight, making them easier to install in aerial setups. GYFTY Fiber Cable is a type of outdoor fiber optic cable primarily used in aerial installations and environments where metallic components are not allowed due to electromagnetic interference (EMI) concerns. GYFTY cables are non-metallic and are ideal for long-distance communication, outdoor data. These cable types include GYTA, GYTS, GYFTY, GYTY53, ADSS, GYTC8Y, and many more, which are well-known identifiers used at Zion Communication. It features a loose-tube design with multiple singlemode or multimode fibers protected by water-blocking. Q1: What is the main advantage of GYFTY cable?

It is an all-dielectric loose-tube outdoor cable with strong water blocking, suitable for aerial and duct deployments in EMI or lightning-prone areas. Q2: What fiber counts are available?

It supports a wide range from 2 to 288 fibers. 2-144 cores for duct and aerial deployment in lightning-prone and high-voltage environments.
