

Will using optical splitters in a network reduce internet speed

Overview

Splitters solve a fundamental challenge in fiber networks: how to share a single fiber infrastructure among multiple users or devices without sacrificing speed or signal quality. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers. By dividing a single optical signal from a central Optical Line Terminal (OLT) into multiple outputs for Optical Network. Gigabit Passive Optical Networks (GPON) have revolutionized fiber-optic broadband by offering high-speed connectivity to multiple users over a single fiber. A key component enabling this efficiency is the optical splitter, which divides the optical signal to serve multiple endpoints.
