

Wireless routers can be directly connected to fiber optic cables

Article Overview

You cannot connect a standard wireless router directly to a fiber optic cable; an Optical Network Terminal (ONT) or fiber-ready modem is required to convert the optical signal into a format your router can use.

Why Direct Connection Isn't Possible

Fiber optic cables transmit data using light signals, which are fundamentally different from the electrical signals that standard routers process. A typical home router cannot interpret these optical signals directly, so attempting to plug a fiber cable into a regular router will not work .

Role of the Optical Network Terminal (ONT)

An ONT is a device provided by your Internet Service Provider (ISP) that serves as the bridge between the fiber network and your home network. It performs optoelectronic conversion, translating the incoming light signals from the fiber into standard Ethernet signals that your router can understand . The ONT usually connects to the fiber cable via a specialized port (often SC/APC or SC/UPC connectors) and outputs data through an Ethernet port.

Connecting Your Router

Once the ONT is installed and active:...
