

XinCe Optical Cable Identifier

Overview

The Optical Cable Identifier is a premium choice in the Cable Tester category. By employing macrobend techniques for non-destructive testing of the fiber optic link, signal direction and power can be measured, thereby preventing line interruptions caused by operator error. The portable design and. The blog discusses practical applications of cable identifier tools, focusing on the HY-8600's ability to precisely locate active fiber-optic cables in complex setups without service disruption, emphasizing efficiency, safety, and adaptability across diverse networking scenarios. Disclaimer: This. Dynamic range of sensitivity to mechanical perturbation over 100 km distance Locate target cable using audio and visual signal (either bar chart or ECG display) Flexible to different fiber connectors (PC, APC or Cut) Non-invasive detection with high accuracy Low power consumption for long working. Can cable testers handle high-volume screenings?

The Optical Cable Identifier is a key item within our extensive Cable Tester selection. Yes, many testers are designed for high-volume, offering robust performance and speed, suited for factory settings and price-sensitive operations. Chat with supplier now for more details. HNHC Brand, 512 Hz Signal Frequency.
